

FIND

FIND partner & publisher brief

Prepared 9 October 2026 | Review candidate; publication pending approval

FIND is being developed to help people identify products and compare eligible offers with clear uncertainty, private inputs and independent retailer choice.

Company

Product: FIND - Find a Better Price. Owner: CODE Digital Technologies LLC. Intended market: U.S. consumers, in English and Spanish. Public website: <https://findabetterprice.com>. Partner contact: partners@findabetterprice.com. Support: support@findabetterprice.com.

Current stage

The reviewed corporate site provides information, free account links, Support and Partners contact. Public product search, coupons and app downloads remain disabled. Android is in development and iOS is planned. Deployment remains conditional on review and Owner authorization.

Coverage

The dated private local test baseline includes 16 participating integrations. The 283-record merchant registry is a qualification inventory, not 283 working integrations. Paused, unqualified and withdrawn entries do not count as active coverage; public display also requires current authorization. The hosted account/contact service has zero merchants. The 16 local integrations are not connected to that hosted service.

Independent choice

Affiliate compensation does not determine offer admission or the Lowest Price ranking. Some eligible offers may provide no commission. FIND does not sell goods, process retailer payment, fulfill orders or handle retailer returns.

Product & partnership

Identification

The intended workflow accepts chosen text, model, merchant SKU, supported barcode or QR identifier, product URL, authorized photo/screenshot or selected video frame. English/Spanish voice requires an explicit action and permission. Review identity before comparing eligible offers. EXACT, LIKELY, POSSIBLE, SIMILAR and UNKNOWN are distinct states, not calibrated accuracy percentages.

Price and final cost

Item price and final total remain separate. Shipping, tax and mandatory charges are unknown when not supported; they are never replaced by zero. Physical offers require home delivery. Checkout price, stock and seller terms are verified at the retailer.

Three savings projections

Three separate projections are retained: potential savings found, potential savings from chosen offers, and estimated savings associated with a user-confirmed purchase. They overlap and must not be added. A click or rating does not prove a purchase or realized savings; incomplete totals cannot generate complete-total savings.

Privacy

Camera and microphone inputs require the user's action and permission. Analysis is bounded and raw media is not retained as a shopping-library attachment. Internal support notes and operational audit records remain private.

Partner readiness

We welcome permitted product-data access, clear seller and variant identity, reliable stock and offer terms, freshness, valid destinations and applicable affiliate program terms. A submitted form is a conversation request; it does not establish approval or qualification.

Inquiry

The partner form requests company, business email, website, territory, categories, subject and message; contact name, network/program and data availability are optional. A receipt is shown only after durable intake is confirmed. No automatic merchant application or outreach is implied.

Publisher descriptions

Short

FIND is a shopping assistant in development that aims to identify products and compare eligible offers clearly, while keeping uncertainty visible and letting shoppers choose the retailer.

Medium

FIND, a product of CODE Digital Technologies LLC, is being built to help shoppers identify products and compare eligible offers. The experience distinguishes product identity, seller, condition, item price and supported final costs. Unknown shipping or tax stays unknown. Affiliate compensation does not determine the Lowest Price ranking, and FIND does not sell goods or complete retailer checkout. The corporate website provides product, support and partner information. Public search remains disabled; Android is in development and iOS is planned.

Long

FIND is a consumer shopping assistant being developed by CODE Digital Technologies LLC. Its intended experience begins with a product the shopper deliberately selects: text, a name, model, identifier, product URL, selected camera/gallery image or screenshot, compatible sharing or selected video frame. EN/ES voice starts only by user action with permission; multiple objects need an explicit selection. These are intended web and native-app inputs, subject to platform limits. Product identification and offer eligibility remain separate decisions. An uncertain match is displayed as uncertain, and identification labels are not presented as measured accuracy. Comparisons distinguish the item price from a complete supported total, including shipping, tax and mandatory charges when those amounts are known. Missing amounts never become zero. The shopper retains control of the retailer choice and verifies the seller, variant, stock and checkout terms at the retailer. Affiliate compensation does not buy a better organic price ranking. Retailer qualification, current permissions and operational status control participation; a candidate in the registry does not establish an active integration or partnership. The public website supplies company, product, support, editorial and partner information. Its product search is announced but disabled, Android remains in development under the private testing gate, and iOS is planned. FIND does not sell the product, process retailer payments, fulfill orders or manage retailer returns. Publishers and potential partners can contact partners@findabetterprice.com for the appropriate conversation.

Claims

Use the canonical FIND brand and the truthful development states above. Do not describe FIND as launched, universally covering retailers, guaranteeing the lowest final cost, completing checkout or certifying product-identification accuracy.

FIND

Channels & review readiness

Channels

The corporate website presents company information, methodology, support and partner inquiries. Its publicly permitted retailer directory is independent of private product comparisons. Directory links require current display permission and a separately validated homepage route; render, rotation and coupon copy never activate tracking.

Network readiness

Prepared for Impact, CJ, Awin and Rakuten publisher review: owner and domain, U.S. audience, English/Spanish content, shopping-assistant business model, editorial property, permitted data methods and business contact. Domain verification is different from network/program approval. No application, automatic outreach, traffic threshold or approval guarantee is implied.

Operational readiness

The corporate website is published; the improved site and public account/contact activation await review and authorization. Private services have been tested with controlled accounts. A contact receipt means durable intake, not guaranteed inbox delivery. Traffic, conversions, commissions and downloads are not claimed without measured evidence.

Free shared account

One 100% free account is prepared for FIND Web and future apps. Register with full name, email and password, verify the email by code, then sign in with email and password. Product search and coupon tools remain coming soon. No credit card, banking details or subscription fees are required.
